

Purr • How to open

A little pixel cat in your menu bar that shows what the Claude desktop app is doing.

You need: an **Apple Silicon Mac** (M1 or newer) with **macOS 13 or later**, and the **Claude desktop app**.

1 Unzip and move it

Download **Purr.zip** from github.com/fyj-creator/Purr (or get it by AirDrop) and double-click it. Drag **Purr** into your **Applications** folder.

2 Open it the first time

Purr isn't from the App Store, so your Mac asks you to confirm it once.

1. Double-click **Purr** in Applications. A warning says it can't be verified. Click **Done**, not "Move to Trash".
2. Open **System Settings** → **Privacy & Security**. Scroll down to **Security**.
3. Next to "Purr was blocked...", click **Open Anyway**, then **Open Anyway** again. Enter your password or use Touch ID.

On macOS 13 or 14 you can instead right-click Purr → Open → Open. You only do this once.

3 Let Purr see Claude

When asked, click **Open System Settings**. Otherwise go to **System Settings** → **Privacy & Security** → **Accessibility** and turn on **Purr**. Then click the cat in the menu bar once.

Purr reads the Claude window the way a screen reader does. It never clicks, types or sends anything, and nothing leaves your Mac.

4 Find the cat

Look at the top-right of your screen. Click the cat to open its panel: a starry night scene, what Claude is doing right now, today's stats and recent steps. Use the ⚙ button to turn on **Open at login**, notifications, or sounds: a bell when Claude finishes and a meow when it needs you.

To update later: click the cat → 🐾 at the bottom of the panel → Install. Purr replaces itself and reopens.

What the cat colours mean

Yellow, walking
Claude is working

Green + heart
Just finished (10 s)

White
Claude is idle

Red
Claude needs your OK

Faint, asleep
Claude is closed or no access yet

Can't see the cat?

Your menu bar may be full; on MacBooks with a notch, extra icons get hidden. Hold **⌘** and drag other icons to make room, or turn off "Show status text" in ⚙.

Cat stays faint?

Make sure Claude is open. Then check Accessibility: if Purr is on but still faint, remove it with **-**, add it again with **+**, and reopen Purr.

Quit or remove

Click the cat → ⚙ → **Quit Purr**. To remove it, quit it and drag Purr from Applications to the Trash.

Your data

Stats and recent steps stay on your Mac only. They reset every day at midnight.
